Is Costa Rica achieving a net-zero emissions target?

The Costa Rican government took several foundational steps as it committed to a midcentury net-zero emissions target in its 2019 National Decarbonization Plan.

Can Costa Rica transform the 2050 National decarbonization plan into a national investment plan?

The Costa Rican government has an opportunity to transform the 2050 National Decarbonization Plan of 2019 into a national investment plan that aligns with its priority areas, calculating costs and estimating needed investments locally and internationally, and making the investment case to local businesses.

Will Costa Rica decarbonise?

Costa Rica has set out to demonstrate fair, adaptive and resilient decarbonisation, committing to an absolute maximum of net emissions in 2030 of 9.11 million tons of carbon dioxide equivalents (CO₂e) including all emissions and all sectors covered by the National Greenhouse Gas Emissions Inventory.

How can Costa Rica make a transformational change?

International investment is one aspect of potential financing, engaging local businesses and investors will also be key politically to make truly transformational change. How to generate these concrete, attractive business opportunities is the next big question for Costa Rica.

Tied to Costa Rica's mainland by weaving rivers and canals, this isolated park is the second-largest wetland in Rica and lures nature seekers looking for a remote piece of jungle paradise.

Technological advancements are dramatically improving industrial energy storage performance while reducing costs. Next-generation battery management systems maintain optimal operating conditions ...
