What is Germany's EV policy?

This law created possibilities to prioritize and encourage the use of electrically powered vehicles in road traffic. Here are the key aspects of Germany's EV policy: The German government offers financial incentives to encourage the purchase of electric vehicles. This includes subsidies for both all-electric and plug-in hybrid vehicles.

What is Germany doing about electric vehicles?

Germany has been a leading proponent of electric vehicles, implementing a range of policies and initiatives to accelerate the adoption of electric vehicles in the country. The target goal by 2030 is to have up to 15 million EVs and 1 million charging stations according to the Climate Action Program 2030.

How many electric vehicles are there in Germany?

The German government has set forth an ambitious goal of 15 million electric vehicles (EVs) deployed on German roads by 2030. In 2023, there were 2.3 million EVs with charging capability on German roads - 1.4 million battery-electric vehicles (BEV); and 900,000 plug-in hybrids (PHEV).

Do electric cars pose a greater health risk from magnetic fields?

A comprehensive study commissioned by Germany's Federal Office for Radiation Protection (BfS) and the Federal Ministry for the Environment (BMUV) has concluded that electric vehicles (EVs) do not pose a greater health risk from magnetic fields compared to conventional combustion engine cars.
