Who regulates energy in Kosovo?

4 The ERO is an independent agency that regulates electricity, district heating, and gas markets in Kosovo. It was established in 2004, after the promulgation of the Laws on Energy, on Electricity, and on the Energy Regulator. The ERO helps to ensure that Kosovo's regulatory framework is in line with the EU 'acquis' on energy.

What percentage of electricity is generated by coal in Kosovo?

Coal accounted for 91% of electricity generation, with the remaining 9% derived from renewable energy sources, predominantly wind energy. Kosovo has been working on diversifying its energy mix and increasing the share of renewable energy sources to reduce dependency on conventional fossil fuels.

How did Kosovo get its own energy system?

Kosovo was part of the Regional Energy Community and was connected with the regional system through interconnections with Serbia, North Macedonia, Montenegro and Albania. KOSTT made an agreement with ENTSO-Eso. Kosovo gets its own independent region of energy administration. Kosovo gets full independence and control of its energy industry.

How will the University of Pristina provide training for Energy Assessors?

The University of Pristina will soon provide training for energy assessors. The EPC calculation software prepared by the Fraunhofer Institute has been incorporated into this platform and will become operational soon.

The fact that the electrical energy system of Albania relies on hydro energy (almost 100%), while Kosovo relies on power plants, is a great opportunity for cooperation between the two countries.

As the figures below highlight, Pristina has a very energy intensive economy, with a high share of electricity and primary energy consumed for every unit of GDP produced.

Highlights and data explorer of monthly electricity production and trade data for all OECD member countries and electricity production data for a selection of other economies.

The purpose of the project is implementation of energy efficiency, structural and comfort measures in 8

Data gathered in the field and presented in this paper are considered to be a first step in comprehensive analysis of the residential sector energy consumption in Pristina.

The public supplier is obliged to purchase electricity from renewable energy sources for a tariff set by the Energy Regulatory Office. The tariff as well as the duration of the incentive period vary among ...

Expected results are to decrease energy consumption and use of coal and electricity as a heating source, which would also decrease the level of pollution in city of Pristina.

help to improve energy-related behaviours such as to promote energy conservation and peak-shaving. Depending on the behavioural bottlenecks, they might suggest small, subtle and cost-efficient ...

This paper presents several scenarios characterized by alternative assumptions for European electricity prices and domestic electricity production in 2023 in order to gauge their potential impact on the ...
