Renewable energy progress in the European Union (EU) is driven by the European Commission 's 2023 revision of the Renewable Energy Directive, which raised the EU's binding renewable energy target ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

Which European countries are leading the renewable drive? While wind and solar generated more electricity than fossil fuels in the EU overall, this was only the case for 14 of the 27 ...

This article provides recent statistics on the share of energy from renewable sources overall and in 3 consumption areas (electricity, heating and cooling, and transport) in the European Union (EU).

Wind energy is a mature and competitive renewable energy source in the EU, key to achieve its renewable energy targets. Solar power is a safe and cost-competitive renewable energy source. The ...

OverviewPolicyMember statesEnergy Community countriesRenewable energy sourcesEconomicsSee alsoExternal linksRenewable energy progress in the European Union (EU) is driven by the European Commission's 2023 revision of the Renewable Energy Directive, which raised the EU's binding renewable energy target for 2030 to at least 42.5%, up from the previous target of 32%. Effective since November 20, 2023, across all EU countries, this directive aligns with broader climate objectives, including reducing greenhouse gas emissions

Europe is a pioneer in the deployment of modern renewable energy technologies. The region can boast to be the home of the first offshore wind park and the first continent to have seen...

Comprehensive news coverage of renewable energy projects, investments, and policies across Europe. Track the latest in solar PV, onshore and offshore wind, hydrogen, energy storage, ...

# Europe renewable energy

Renewable electricity Renewable electricity additions for 2025-2030 total 4 600 GW - equal to the combined installed power capacity of China, the European Union and Japan Globally, renewable ...

As we step into 2026, Europe's renewable energy sector is at a pivotal crossroads. With the EU's ambitious targets under the Green Deal aiming for 42.

In 2023, the European Union experienced a historic surge in renewables, marking a record-breaking year for energy production from sustainable sources. With a substantial increase in ...
