How long can a generator run on a full tank?

Gasoline generators typically run for around 8 to 12 hours on a full tank, while diesel generators can run for 24 to 48 hours on a full tank. Propane generators can run for up to 48 hours, depending on the size of the propane tank. The size of the generator's fuel tank will also affect its runtime.

How long can a natural gas generator run?

The exact length of time a natural gas generator can run will depend on several factors, including the generator's size and load capacity, as well as the availability and pressure of the natural gas supply. However, in general, natural gas generators can run for days or even weeks without the need for refueling.

How often should a generator be maintained?

To keep your generator running for many hours, it's important to maintain it regularly. Don't wait for a power outage to run the generator. Full maintenance of a generator involves changing the oil or air regularly, changing fuel filters, and checking if there is any change in performance.

How often should a generator be run under light load?

Letting your generator run weekly under light load helps prevent fuel from going bad and keeps internal systems lubricated. Overuse, like running it near full load for long stretches, burns through its life expectancy quicker. It's like driving a car pedal-to-the-floor all day.
