And there a lot of factors to consider other than how it stacks up in today's generation mix compared to legacy resources. We've compiled a list of some of the best solar statistics of 2013 that ...

In 2013, California had the most installed renewable electricity capacity of any U.S. state (26.0 GW), and also had the most grid-connected solar PV capacity (5.1 GW).

When the final 2013 numbers were added up, there were 440,000 operating solar electric systems across the U.S., totaling more than 12,000 MW of PV and 918 MW of CSP.

By the end of 2013, the total installed PV capacity in the United States was 12.1 GWDC. Eighty-two percent of this capacity was installed in the last three years alone. 155,000 PV installations were ...

Solar is now the second largest source of new electricity capacity in the U.S., behind natural gas, and GTM estimates that by the end of 2013, more than 400,000 solar projects will be ...

Most are individual photovoltaic power stations, but some are groups of co-located plants owned by different independent power producers and with separate transformer connections to the grid.

Solar photovoltaic (PV) added 2,193 MW of capacity in 2013, continuing the trend of the past few years of strong growth, helped in part by falling technology costs as well as aggressive state ...

This chart shows cumulative installed solar photovoltaics capacity in leading countries.

When the final 2013 numbers were added up, there were 440,000 operating solar electric systems across the United States, totaling more than 12,000 MW of PV and 918 MW of CSP.

With about 37,007 megawatts (MW) of solar PV power installed in 2013, world solar PV power capacity

How many solar power plants are there in 2013

increased about 35% to 136,697 MW.

Most are individual photovoltaic power stations, but some are groups ...
