US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

The U.S. energy storage industry will invest \$100 billion over the next five years to build and buy batteries made in the United States, the American Clean Power Association and company ...

Globally, annual energy storage deployment (excluding pumped hydropower plants) is set to hit another all-time high at 92 gigawatts (247 gigawatt-hours) in 2025 - 23% higher than in 2024. ...

According to the report, U.S. storage will reach 87.8 GW by 2029, driven by residential and utility-scale segments amidst a constantly evolving policy environment.

Transitioning from fossil fuels to renewable sources such as solar, wind, and hydro involves a staggering amount of investment. According to recent reports, the total global renewable ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Investment in solar, both utility-scale and rooftop, is expected to reach \$450 billion in 2025, making it the single largest item in the global energy investment inventory. Battery storage ...

Through the first three quarters of 2024, 83 energy storage financing and investment deals were reported completed for a total of \$17.6 billion invested [1]. Of these transactions, 18 were M& A ...

Reaching this capacity would require a total investment of \$1.5-\$3 trillion. In the U.S., a Department of Energy analysis projected a need for 225-460 GW of long-duration energy storage ...

How much investment will be added to new energy storage

After record growth in 2024, U.S. battery energy storage systems (BESS) could grow from more than 26 gigawatts (GW) of capacity--enough to power 20 million homes--to anywhere from ...
