What is the long-term energy policy of Mauritius?

In April 2007, the Government of Mauritius adopted the 'Outline of the Energy Policy 2007-2025 - Towards a Coherent Energy Policy for the Development of the Energy Sector in Mauritius'. This document outlines the Government's long-term vision for the energy sector.

Should Mauritius invest in New electricity generation plants?

Mauritius needs massive investment in new electricity generation plants over the next 25 years. Government priority will be to secure adequate investment by putting in place the proper market conditions for such investment.

Is the energy strategy in Mauritius sustainable?

The energy strategies in Mauritius, which have been demand-driven without incentives to reduce demand, can no longer be sustainable. It is the duty and responsibility of the Government to work towards decreasing carbon dioxide emissions in light of environmental issues.

What is the energy composition of Mauritius?

In Mauritius, fossil fuel makes up 79 % of the energy mix. In contrast, Electric Vehicles (EVs) have zero carbon and zero pollutants, reduced noise, and absence of vibrations. Their automatic transmission leads to driving simplicity and have particularly excellent acceleration performance. A distinctive feature of EVs is their battery, which powers the drivetrain of the vehicle.

A series of bold measures being implemented to accelerate our energy transition.

o The 2030 energy transition roadmap provides for an estimated investment of USD 1.35 billion in the sector by horizon 2030, encompassing generation from solar, wind, biomass, hybrid renewable ...

Amidst various constraints, they engineered a way to rise to the challenge. The country is currently witnessing a new energy transition geared towards integrating more renewable energy.

An in-depth analysis of Mauritius' energy transition, outlining renewable energy targets, decarbonisation, energy security, affordability, and a practical metrics-based framework to guide ...

Mauritius energy transition

Solar power was the second largest source of renewable energy, accounting for 5.1%. Numerous projects have been announced to boost those figures, and as encouraging as they sound, ...

In the wake of current challenges including the energy crisis, a strategic reset was essential to reposition Government's ambitions within a realistic and achievable framework, hence ...

Mauritius's Energy Transition Goals The Republic of Mauritius has laid out an ambitious roadmap for its energy future, aiming to generate 60% of its electricity from renewable sources by 2030.

In fact, in its National Determined Contribution (NDC), Mauritius would like to increase the share of renewable energy to 60% by 2030 [32]. In this article, the case of energy transition in ...

Explore Mauritius' energy transition, focusing on renewable energy leadership, blue economy strategy, and essential mineral production, driving sustainable growth and regional clean ...

energy security. The Government of Mauritius has committed not only to abate GHG emissions by 40% by 2030 but more importantly to pursue its green energy transition and develop a more resilient ...
