According to the US Energy Information Administration's latest survey of electric generating capacity changes, developers in the US have added 12GW of new utility-scale solar ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the ...

The U.S. Energy Information Administration predicted in 2021 that 46 gigawatts (GW) of new grid-scale electric generating capacity-- almost half of it solar--would be added to the U.S. ...

2024 ATB data for utility-scale solar photovoltaics (PV) are shown above, with a base year of 2022. The Base Year estimates rely on modeled capital expenditures (CAPEX) and operation and maintenance ...

Utility-scale solar farms are at the forefront of the transition to renewable energy. Ranging from 1 MW to GW+ in capacity, these installations are crucial in reducing reliance on fossil fuels and ...

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

The threshold for a solar project to be considered utility scale is generally accepted to be around 5 MW, which can power around 1,000 homes. Utility scale solar provides economies of scale, ...

New solar utility-scale operations made up the largest amount of electric generating capacity added in the U.S. for the first half of 2024.

The project is a large-scale solar energy initiative developed on 10,000 acres of land north of the city of

New solar power station scale

London near Plumwood in Madison County. The project is expected to have a maximum ...
