New Zealand's energy landscape is facing a perfect storm. With hydro storage at historic lows and natural gas production declining, energy prices are surging. As we turn to costly imported ...

Concept Consulting's modelling shows that without thermal generation from the Rankine units as part of New Zealand's energy storage solution, wholesale electricity prices would likely be 60% higher in the ...

The suite of Energy Link models used for this analysis utilise well established market dynamics and economic principles to estimate investment in new generation and future wholesale electricity prices.

This article explains how New Zealand's electricity system is designed to react to changes in supply and how it responds to high amounts of renewable generation.

But winter may well still see price spikes if we don't address seasonal storage. Scrapping most of the NZ Battery Project, as others have observed, may well prove shortsighted.

Energy in New Zealand 2025 Comprehensive information on and analysis of New Zealand's energy supply, demand and prices.

With strategic investments and cross-sector collaboration, electrochemical storage will anchor New Zealand's clean energy future, ensuring its landscapes remain pristine while powering...

By strengthening its gas market, securing backup fuel for electricity and continuing to build renewables at pace, New Zealand can lower wholesale electricity prices.

This report presents the findings and recommendations of a year-long research project initiated by EECA to better understand the value proposition of residential solar PV, including with the addition of ...

New zealand energy storage new energy prices

Without significant rain and snowmelt to increase hydro storage, more thermal generation will be needed in the coming months, which will mean higher wholesale electricity prices. The ...
