Texas is expected to continue adding large amounts of energy storage capacity to its grid, with nearly 4.5 GW currently under construction and an additional 7.3 GW in the pipeline.

The 300 MWh Revolution energy storage facility was completed in one year--on schedule and within budget.

While Texas remains opposed to mandates and capacity markets, a series of state and federal developments are introducing new risks, constraints, and subtle incentives that storage ...

Because Texas runs its own electric grid through ERCOT, we can't rely on other states for backup. So when it comes to keeping the lights on here, battery storage is about as ...

Joshua Rhodes, a research scientist at The University of Texas at Austin, compares energy storage batteries to Lego bricks that can be transported by truck, assembled on location and connected to ...

Market forces are bringing new electricity storage technologies to market, and those technologies are making the grid more reliable and preventing costly price spikes. The best example ...

The growth of hybrid energy systems that combine storage technologies with wind and solar generation assets is expected to continue gaining traction in Texas. Incorporating energy ...

With Texas being one of the nation's leaders in energy storage growth, now is the time for businesses to capitalize on this momentum and take control of their energy future.

Energy storage is a key component of Texas' renewable energy ambitions. By buffering intermittent power sources like wind and solar, storage solutions enable a more consistent power ...

Here is a map of all utility-scale battery storage projects in Texas. Hover over a battery storage project to view information on each project like their name, capacity and construction date.
