China's latest wave of solar mega-factories is not just adding capacity, it is redefining the scale at which a single country can manufacture and install clean power. From desert complexes the ...

The world's biggest solar plant has come online in China, capable of powering a small country with its annual capacity of more than 6 billion kilowatt hours. The facility in a desert region...

Xinjiang is sparsely populated and abundant in solar and wind resources. This makes it an ideal site for massive renewable energy bases that transmit most of their power over long ...

Midong features 5.26 million 650-W monocrystalline bifacial double-glass photovoltaic (PV) panels. The facility's infrastructure includes more than 1.23 million supporting piles, five 220-kV...

China races to build world's largest solar farm to meet emissions targets Tibetan sheep graze at a solar farm in Hainan prefecture of western China's Qinghai province on Tuesday.

Explore China's massive solar megaprojects. Learn how gigawatt-scale photovoltaic farms in remote regions are reshaping the global energy landscape.

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China is now building at even higher elevations in mountain valleys on the Tibetan Plateau, although with smaller solar farms. Near Lhasa, the capital of Tibet, a Chinese power ...
