Livestock are a very effective vegetative management tool for community and utility solar energy systems. Cattle are grazed in some solar projects, but typically it is sheep that are used to ...

Enel's award-winning solar grazing agreement puts 13,000+ sheep managing vegetation on solar farms, embracing agrivoltaics at industrial scale.

Her operation now manages 500 ewes across nine solar sites, producing local lamb alongside clean energy. From an engineering standpoint, this suitability of sheep to such environments is not an...

In 2023, the Spanish company Iberdrola announced the installation of a flock of 300 sheep in its photovoltaic parks in Portugal. "It is beneficial for the solar park, as it ensures the ...

Solar photovoltaic (PV) growth can be stalled due to social acceptance. Agrivoltaics can improve social acceptance by enabling dual use of land. The most popular type of agrivoltaics in ...

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. This dual-use approach not only supports clean ...

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.

The study, led by engineering and Ivey Business School professor Joshua Pearce, shows utilizing sheep on solar farms was not only lucrative for farmers but offered a promising path forward ...

Raising "solar sheep" under solar panels offers a lucrative and sustainable opportunity for farmers,

Solar Photovoltaic Sheep Farm

according to a study led by Western University. These sheep naturally graze under ...
