The U.S. plans to add 97 GW of power in 2025, with solar and storage leading the charge. Here's how renewables are reshaping the energy mix.

Overall, July to September 2025 was the third best quarter ever for new solar installations. Solar accounted for almost 80% of new electrical generating capacity through ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

Sources: Wood Mackenzie Power and Renewables and Energy Storage Association, U.S. Energy Storage Monitor: Q1 2025, 2025; Utility Dive, After Moss Landing, what's next for battery ...

Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW installed. Combined, solar and storage accounted for 82% ...

During the first nine months of 2025, solar and battery storage have dominated growth among competing energy sources, according to the EIA.

A recent report by the U.S. Energy Information Administration (EIA) has shed light on the upcoming trends in the energy sector, highlighting the rapid growth of renewable energy sources ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

Much of the utility-scale solar generation capacity additions will come online in Texas. We expect that solar electricity generation supplied to the grid managed by the Electric Reliability Council ...

# Solar power generation and energy storage in 2025

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the ...
