The 43,000 customers out of 60,000 in their base who were still without power as of Friday morning are getting a little fractious about when the lights are coming back on. If they had to ...

After hitting the mobile home park, the tornado continued ...

After hitting the mobile home park, the tornado continued northwest toward Duke Energy's Lake Placid Solar Power Plant. The facility could generate 45 megawatts of electricity, ...

No, solar panels do not create tornadoes. Scientists have looked into it, fact-checkers have debunked it, and renewable energy experts have explained why this theory does not quite ...

A dramatic drone video is providing a bird's-eye view of the destruction left behind when a tornado spawned by Hurricane Milton tore through a Florida solar power plant.

Ahead of Hurricane Milton's landfall, there were 126 tornado warnings issued by the National Weather Service in Florida. Watch this video to see the path one twister tore through a massive field...

"Simplifying tornado formation and occurrence to simply the radiation emitted (or reflected) by solar panels is a gross, error-filled representation of severe weather hazards," Hill said.

Duke Energy's Lake Placid Solar Power Plant experienced an EF-2 tornado during Hurricane Milton, shredding a swath of solar modules while leaving most of the facility intact.

A tornado tore through a solar power plant in central Florida. Footage released by Duke Energy shows a swath of solar modules ripped from the single-axis trackers holding them in place. ...

In the aftermath of Hurricane Milton in October 2024, footage of solar projects ravaged by tornadoes spread across social media, raising questions about PV's resilience to extreme weather....

Tornado blows solar power

In fact, many solar panels are rated to withstand wind speeds of up to 140 miles per hour or higher, meeting or exceeding the standards set by building codes in tornado-prone areas.
