The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

The EU is "rapidly" moving towards a clean energy future, but experts warn our "outdated" grid is holding us back. Wind and solar generated more EU electricity than fossil fuels for ...

Existing electrical grids in many European countries are often outdated and not designed to handle the influx of decentralized energy sources like solar. This hampers the efficient distribution ...

Southern and Eastern Europe have some of the highest solar and wind potential in the EU -- but they remain underutilised. Supporting clean-tech industry development in these regions -- ...

In 2024, solar generated 11% of EU electricity, overtaking coal which fell below 10% for the first time, according to the European Electricity Review published today by think tank Ember. EU ...

The winter of 2025 has been brutal for Europe, exposing the severe flaws of its over-reliance on wind and solar energy. As temperatures plummeted, countries grappled with electricity ...

BRUSSELS, Jan 22 - Wind and solar power produced more electricity than fossil fuels in the EU for the first time last year, data published on Thursday showed, indicating the bloc's...

While the furious expansion of solar generation bodes well for efforts to replace fossil fuels, the breakthrough also exposed flaws in the energy system. Power prices turned negative during...

As part of the REPowerEU plan, in May 2022 the Commission adopted an EU solar energy strategy, which identifies remaining barriers and challenges in the solar energy sector and outlines initiatives ...

Why Europe doesn't generate electricity from solar energy

Researchers say event described as "major tipping point" for clean energy in era of destabilised politics Wind and solar overtook fossil fuels in the European Union's power generation ...
